

Chemistry 1B Laboratory Manual

Contents

Experiment 5: Rate of Reaction	1
Part I: Effect of Concentration on Rate	2
<i>Pre-Lab Question for Part I</i>	6
Part II: Effect of Temperature and Catalysts on Rate	7
<i>Pre-Lab Question for Part II</i>	11
Experiment 6: Shifts in Equilibrium: Le Châtelier's Principle	13
<i>Pre-Lab Question</i>	20
Experiment 7: Determination of an Equilibrium Constant	21
<i>Pre-Lab Question</i>	27
Procedure for Use of Spectronic 20D Spectrophotometers	28
Experiment 8: H⁺ Transfer Reactions: Relative Strengths of Acids	30
<i>Pre-Lab Questions</i>	33
Experiment 9: Acid-Base Indicators and pH	34
Experiment 10: Determination of the K_a Value and Molar Mass of an Unknown Weak Acid	41
<i>Pre-Lab Question</i>	49
Experiment 11: Buffer Solutions	50
<i>Pre-Lab Calculations</i>	52, 53, 54
Experiment 13: Relative Stability of Precipitates and Complex Ions of Cu²⁺	57
<i>Pre-Lab Questions</i>	61
Sample Analysis: Precipitates and Complex Ions of Ag ⁺	62
Experiment 14: Electrochemistry	66
<i>Pre-Lab Questions for Part III</i>	72, 74

Experiment 15: Applications of the Nernst Equation	75
Experiment 16: Qualitative Analysis	78
Part I: Spot Tests for Some Common Ions	78
Part II: Identification of Unknown Solids	82
<i>Pre-Lab Question for Part II</i>	86
Solubility Properties of Ions and Solids	87
Experiment 17: Thermodynamics of Borax Solubility	90
<i>Pre-Lab Question</i>	94
